

TEMPLATE FOR MODULAR POCKETBOOK THINGY [wb-001]

- Cut this template out along the solid lines and clearly marked holes.
- Mark the resulting silhouette on your leather.
- Use a leather punch (or fork) along longer dashed lines to create equally spaced holes.
- Assemble wallet pocket with a saddle stitch and waxed thread.

This project was designed with 2mm elastic cord in mind however whatever size you have most likely will be able to fit in the leather.

If you do not have elastic around, look at old garments or bags that you no longer used. The elastic I used from mine was salvaged from an old parka.

Let me know if you actually build one of these. I'd love to hear about it!
